

Minimum Technical Specification of HRMS and Attendance System				
Sr. No.	Parameter	Minimum Required Features/Specifications	comments	Compliance (Yes or No)
1	Overview of Solution	HRMS software would be designed for DIAL 112 operations. This would cover the electronic supervision and measurement of the following indicative personnel processes and transactions related to: • Time and attendance • Leave management • Training conducted • Code violations if any • Complete life cycle of personnel from selection, evaluation to exit		Yes
2	General Requirement	The solution must be fully integrated system and automate all related processes for State-wide Dial 112 Project Manpower related activities		Yes
3	General Requirement	The solution must be real-time update and access of detailed data		Yes
4	General Requirement	It should have accurate and easy availability of information with drill downs, drill ups with supporting data		Yes
5	General Requirement	It should have MIS from the system (reports daily or weekly or monthly or yearly or till date) comparison of data (Past or Current)		Yes
6	General Requirement	System should be web based		Yes
7	General Requirement	All forms and reports should be downloadable and printable in pdf format		Yes
8	General Requirement	Should be able to integrate with user directory	API Should be Provided by the Client	Yes
9	General Requirement	Should have the ability to integrate with Patrol Management System	API Should be Provided by the Client	Yes
10	Attendance & Leave Management	HRMS will be integrated with Face Recognition biometric system for attendance. Those connected with Fleet Operations shall be doing the same through the MDT.	API or Data Should be Provided by the Client for Biometric System and For the Field User We will provide the Android Based App(apk) for MDT	Yes
11	Attendance & Leave Management	System should have ability to view list of weekly offs, holidays in a year as per Dial 112 RFP		Yes
12	Attendance & Leave Management	System should have ability to apply for leave under the appropriate category and state the reasons for it		Yes

13	Attendance & Leave Management	System should have ability to Check the status of leave request		Yes
14	Attendance & Leave Management	System should have ability to approve or cancel or modify leave requests by staff		Yes
15	Attendance & Leave Management	System should have ability to view accrued leave balances		Yes
16	Attendance & Leave Management	System should have ability to intimate the officer concerned when a staff member goes on unauthorized leave (unmarked attendance) or returns back from unauthorized leave or extends leave or reports in the middle of the sanctioned leave period (along with appropriate reduction in sanction)		Yes
17	Attendance & Leave Management	persons on attendance and leave details: 1) consolidated status of present or absent staff members working under him or her 2) number of staff members for whom leave has not been approved or declined or modified 3) number of staff members attending office late 4) total number of leave quota (category-wise) and actual leaves taken in a period by a staff member		Yes
18	Attendance & Leave Management	System should have ability to manage on-line application, tracking and approval of various kinds of leave through workflow logic and self-service		Yes
19	Attendance & Leave Management	System should have ability to update work schedule or shift pattern of staff		Yes
20	Attendance & Leave Management	System should have ability to maintain working hours, weekly offs and national or local holidays		Yes
21	Attendance & Leave Management	System should have ability to define overtime facility		Yes
22	Attendance & Leave Management	System should have ability to define leave quota for staff		Yes
23	Attendance & Leave Management	System should have ability to manually update attendance & leave details of staff in case for a staff member to whom access card is not applicable		Yes

24	Attendance & Leave Management	System should have ability to correct attendance & leave details of staff		Yes
25	Attendance & Leave Management	System should have ability to update half day attendances or leaves in the system		Yes
26	Attendance & Leave Management	It should facilitate leave balances to be merged or transferred or credited through an accrual process in the system automatically based on user defined criteria		Yes
27	Attendance & Leave Management	System should have ability of record keeping and maintenance of historical data		Yes
28	Training	It should have ability to capture Training needs of various classes of staff		Yes
29	Training	It should have ability to capture Training needs of staff met or not met during the quarter or year		Yes
30	Training	It should have ability to formulate and update Annual Training Calendar with list of Training Programmes, Batch size, target group etc.		Yes
31	Training	It should have ability to provide input for payment to Trainers or Institutes		Yes
32	Training	It should have ability to update list of Trainers or Institutes for various training programmes		Yes
33	Training	It should have ability to record participant's attendance in training programmes and staff members nominated but did not attend a training programme		Yes
34	Training	It should have ability to notify supervisors of staff members about the nomination for training programme		Yes
35	Training	It should have ability to define and print training nomination letters to be sent to staff for invitation		Yes
36	Training	It should have ability to customize training feedback form and training nomination letters		Yes
37	Training	It should have ability to define training feedback & effectiveness form		Yes
38	Training	It should have ability to manually update training feedback provided by participants in the online feedback form		Yes
39	Training	It should have ability to analyse training feedback		Yes
40	Training	It should have ability to capture Training facilities available within the organization		Yes
41	Training	It should have ability to capture course content of all training programmes along with list of Target group, batch size		Yes
42	Training	It must have functionality for online registration, cancellation, rescheduling, reminder and confirmation of training classes		Yes

43	Training	For any request raised with regards to registration, cancellation, rescheduling, it should provide the functionality to approve or reject the request by competent authority		Yes
44	Training	It should have ability to maintain training database with full training history of entire staff		Yes
45	Staff Master	Ability to store and maintain staff's personal data such as staff members no., name, addresses, phone numbers, emergency contact information and email addresses, Salary Bank Account Details, passport details		Yes
46	Staff Master	Ability to maintain staff's gender, date of birth, blood group, citizenship, marital status, religion, caste etc.		Yes
47	Staff Master	Ability to maintain a staff's education, certifications, degrees, and any endorsements		Yes
48	Staff Master	Ability to maintain previous (multiple) employment details like name of the organization, department, position held (designation), start or end dates, reason for leaving, last salary drawn, references etc.		Yes
49	Staff Master	Ability to maintain names, date of birth and contact details of spouse, children, dependents, parents , etc		Yes
50	Staff Master	Ability to maintain staff's recruitment category like physically handicapped or sportsperson or ex-servicemen or specialist or SC or ST or OBC or compassionate grounds or Others		Yes
51	Staff Master	Ability to update staff member's recent photograph		Yes
52	Staff Master	Ability to maintain the dialect and languages known with details of speak, read and write separately . Clear indication for the mother tongue		Yes
53	Staff Master	Ability to maintain history of trainings attended (prior to joining & after joining) like name of the course, name of the Institution, month & year of training, duration of the course in days or weeks etc.		Yes
54	Staff Master	Ability to maintain date of joining, probation period, date of confirmation in each grade or post		Yes
55	Staff Master	Ability to date and time stamp all changes in the database enabling data availability on 'as on date or time' basis		Yes
56	Staff Master	Flexibility of additionally capturing any information relating to staff member at a later date		Yes
57	Staff Master	Ability to maintain concurrent jobs for staff with additional responsibilities or special duties in addition to regular responsibilities		Yes
58	Staff Master	Ability to update only authenticated data reflected in the staff's master		Yes
59	Staff Master	Ability to maintain staff's data with regards to claims, etc.		Yes
60	Staff Master	Ability to maintain and view staff leave details		Yes

61	Staff Master	Ability to maintain staff's data with respect to PF, Gratuity, etc. and the nominations for the same		Yes
62	Staff Master	Ability to provide restricted access to different classes of staff master data		Yes
63	Staff Master	Ability to maintain Audit trail of all changes made to sensitive information		Yes
64	Staff Master	Ability to maintain service files documents in scanned form including Proof of Education, expirience, 7identity documents, Date of Birth, domicile, photograph etc.		Yes
65	Staff Master	Ability to send alerts to appropriate authorised persons when driving license expires or violation is logged in against a staff member or on any other related issue	For Any kind of violation(i.e. Traffic Rule and FIR etc.) we required API from other System	Yes
66	FRV attendance	HRMS shall be accessible to FRV Staff and attendance system FRV shall be integrated with HRMS. Registration of Field/FRV Staff shall be available at DPCR level		Yes
67	e-learning	HRMS shall be integrated with e-learning to keep track of learning, training attended training required by DIAL 112 officials	API Required	Yes
68	CAD Solution	HRMS shall be integrated with CAD Solution to keep track of staff accessing the CAD application	API Required	Yes
69	MDT Integration	Integration with MDT's application shall be available. HRMS facility to be available o MDT platform for FRV staff attendance	API Required	Yes
70	CAD mobile solution integration	HRMS facility to be integrated available on CAD mobile application	API Required	Yes
71	Geo coordinates	HRMS shall be able to capture location/ coordinates at the time of capturing attendance		Yes
72	General Requirement	For leave approval notifications, SMS facility shall be available	SMS API Should provided by the Client	Yes
73	Biometric attendance system	Centralized monitoring of the DPCR staff through integration with biometric attendance system	API Required	Yes
74	Facial attendance system integration	SUCCESSFUL BIDDER to develop facial recognition-based attendance monitoring tool/ solution. The same will be installed on MDTs and mobiles. HRMS to be integrated with Facial recognition-based attendance solution	We will providet the Separate Android APK	Yes
75	General Requirement	The solution should be integral/integrated with the CAD Software	API Required	Yes
76	General Requirement	The solution should maintain the detailed record of all the police personnel, assigned to FRV duty by their respective police stations (in all 3 shifts) in DIAL 112 Project		Yes

77	General Requirement	The solution should have provision of capturing biometric (facial/fingerprint) attendance of all the police personnel (one or more per shift) on start/end of the shift	facial, By Mobile APP	Yes
78	General Requirement	The solution should be integrated with the HRMS Section of the CAD Software.	API Required	Yes
79	General Requirement	The solution should show the complete attendance (live/historical) of the policemen. The Solution should display the details of the policemen on duty (shift wise). The solution should also display the historical data of the policemen on duty (shift wise) on all the FRVs (including two-wheeler FRVs).		Yes
80	General Requirement	The solution should generate various reports base on the police personnel's attendance data as per requirement of the Department.		Yes
81	General Requirement	The solution should be integral/integrated with the CAD Software	API Required	Yes
82	General Requirement	The solution should maintain the detailed record of all the drivers deployed in DIAL 112 Project		Yes
83	General Requirement	The solution should have provision of capturing biometric (facial/fingerprint) attendance of all the driver on start/end of the shift.	facial, By Mobile APP	Yes
84	General Requirement	The solution should be integrated with the HRMS Section of the CAD Software.	API Required	Yes
85	General Requirement	The solution should show the complete attendance (live/historical) of the drivers. The Solution should display the details of the pilots on duty (shift wise) on the FRVs on real time basis. The details like Name, Mobile No. Address etc. The solution should also display the historical data of the drivers on duty (shift wise) on all the FRVs.		Yes
86	General Requirement	The solution should generate various reports base on the drivers' attendance data as per requirement of the Department.		Yes
87	Driver Attendance	The solution should be integral/integrated with the CAD Software	API Required	Yes
88	Driver Attendance	The solution should maintain the detailed record of all the drivers deployed in DIAL 112 Project		Yes
89	Driver Attendance	The solution should have provision of capturing biometric (facial/fingerprint) attendance of all the driver on start/end of the shift.	facial, By Mobile APP	Yes
90	Driver Attendance	The solution should be integrated with the HRMS Section of the CAD Software.	API Required	Yes
91	Driver Attendance	The solution should show the complete attendance (live/historical) of the drivers.		Yes
92	Driver Attendance System	The Solution should display the details of the pilots on duty (shift wise) on the FRVs on real time basis. The details like Name, Mobile No. Address etc.		Yes

93	Driver Attendance	The solution should also display the historical data of the drivers on duty (shift wise) on all the FRVs.		Yes
94	Driver Attendance	The solution should generate various reports base on the drivers' attendance data as per requirement of the Department.		Yes

Minimum Technical Specification of Fleet management System			
Sr.	Minimum Required Features/Specifications	Compliance (Yes or No)	
1	SUCCESSFUL BIDDER to provide with the tools that shall organize, manage, and coordinate work FRVs from a single platform.	Yes	
2	It helps to improve performance, provide compliance, and optimize costs	Yes	
3	It shall be integrated with HRMS in order to determine the staff of the PRVs for the given time period/slot.	Yes	
4	To receive routine information/ notifications for preventive maintenance	Yes	
5	Digital Vehicle Inspection Reports (DVIR) to report vehicle and maintenance issues quickly and efficiently.	Yes	
6	Application shall generate real-time FRV pilot behaviour data and driver risk profile to help fleet managers for identifying drivers who are at high risk. This shall be with the help of existing video analytics made possible with the dash camera feeds being received – drowsy driver, unkempt appearance, not in uniform, rash and over-speeding, not wearing seat-belt.	Not Applicable	
7	Fleet management systems would also create driver safety league tables that can be used for safe driving incentive programs.	Yes	
8	Application shall make of use of the data being populated every little while for supervision of FRV operations and maintenance e.g., refuelling of vehicles, submission of bills, logging the odometer readings at the time of FRV handover-takeover for patrol vehicle mileage validation, periodic inspection reports, and code violations if any etc.	Yes	
9	The application shall provide insights in terms of BI reports for 1 glance view as well as informs of detailed reports.	Yes	
10	Fleet management application should be able to facilitate supervision, monitoring, and effective management of FRV's	Yes	
11	The application should be able to be installed on MDT and should work seamlessly on the Desktops using a web link (for usage by Dial112 or its representative and by the District FRV Manager from its premises)	Attendace Android APP and Web URL for Other Opertions Yes	

12		The system should be able to generate all kinds of reports necessary for efficient management of FRVs and should include (but not limited to): - FRV Front, Rear, LHS profile, RHS profile, Flashing lights, condition of interior etc. - FRV Driver vehicle report - FRV movement report - FRV Handover-Takeover report - FRV maintenance reports - FRV inspection reports - FRV fuel reports - FRV personnel reports - FRV accidental repair reports - FRV code violation reports	WE will provide to Capture the Vehicle Images from Our Android App (APK) YES
13		The application shall have a provision of logging the odometer readings at the time of FRV handover-takeover so as to image capture the details of patrol mileage by the outgoing FRV personnel. These readings as captured by the application shall be reported to the central system and shall act as an authentic source of validation. The system should be able to integrate with the AVLS and also the GPS in MDT with Odometer for automatic update of the Kilometres travelled	API & MAP API Required to Calculate the KM on the basis of Geo Location YES
14		System will enable other sources of validation of the odometer readings submitted by the FRV personnel through the in-built GPS in MDT that tracks the distance run by the FRV on its assigned Patrol route every day as part of the central solution that tracks each of the 1,200 FRVs across the state	YES

15		The system will facilitate maintenance of proper records as defined by the Department, including but not limited to: i. FRV personnel logs -Drivers, District Fleet Manager, Zonal Fleet Managers ii. (For Drivers, District FRV Managers including their personal details, attendance through the image captured on MDT camera etc.) iii. PRV Maintenance Service Book iv. Repair or Maintenance History for each FRV (through the stored images captured on MDT camera etc.) v. Breakdown or Maintenance or Out of Service schedule (through the stored images captured on MDT camera etc.) vi. Maintenance files for FRVs (with maintenance status etc. through the stored images captured on MDT camera etc.) vii. Inventory of consumables required for uninterrupted PRV operations (through the stored images captured on MDT camera etc.) viii. FRV periodic inspection reports (through the stored images captured on MDT camera etc.) ix. Fuel records, Fuel Card-Driver Id Card transaction summary reports (through the stored images captured on MDT camera etc.) x. Vehicle maintenance records (through the stored images captured on MDT camera etc.)	YES
16		System shall also be able to provide FRV Response time records to Dial112 through the application online. The data should be suitable for Statistical Analysis for all FRV responses. These records should include the following data elements: FRV- Identifier, Time-FRV en-route, Time-FRV clear and Time-FRV- available for the next call.	Not Applicable
17		The application should have provision to monitor and enlist periodic Inspections (at least one every Week) to determine the FRV condition including compliance or otherwise with the maintenance manual, the maintenance program, specifications (through MDTs) and standards and the maintenance required and shall submit online reports and images of such Inspections to the Department through the MDT application as defined by the Department.	YES
18		The application will store FRV manuals, general FRV handling guides etc. in electronic format	YES
19		System should be able to maintain all the other relevant Department records in electronic format and should be readily available for Department's use at any point of time	YES
20		The system should be updated with the List of Authorized Service Centers and should allow the update of this list by the user whenever required	YES

Minimum required features for Duty Assignment System			
21		The solution should be integral/integrated with the CAD Software	API Required, YES
22		The solution should maintain the detailed record of all the drivers deployed in project.	YES
23		The solution should have provision of capturing biometric (facial/fingerprint) attendance of all the driver on start/end of the shift.	facial, YES
24		The solution should be integrated with the HRMS Section of the CAD Software.	API Required, YES
25		The Solution should display the details of the pilots on duty (shift wise) on the FRVs on real time basis. The details like Name, Mobile No. Address etc. The solution should also display the historical data of the drivers on duty (shift wise) on all the FRVs.	YES
26		The solution should generate various reports base on the drivers' attendance data as per requirement of the Department.	YES
Vehicle Maintenance System			
27		The Solution should be integral/integrated with the CAD Software	API Required, YES
28		The solution should maintain the detailed record of all the vehicles deployed in Dial 112 Project	YES
29		The solution should maintain the details of the HOTO of the vehicles online through MDT with images.	YES
30		The solution should maintain all the records of all the maintenance/repairing activities performed in the vehicle during the entire project period through MDT with images..	YES
31		The solution should provide the live/synced/updated status of the odometer reading of the vehicle through MDT with images.	We will capture the image and Provide the Option to Enter the Reading of odometer, YES
32		The solution should create alert for the due of maintenance activities to be performed based on the guidelines provided by the Vehicle OEM	YES
33		The solution should be capable of making the vehicle ON/OFF Road into the CAD system	API Required, YES
34		The solution should be capable for integration the GPS data records of the deployed vehicles	API Required, YES
35		The solution should create alerts on crossing various milestones like running of (x) Kms completed, off road for more than (x) days etc.	API Required, YES
36		The solution should be capable of generating various reports as per requirement of the Department.	YES
37		The solution should be capable of showing complete details of the vehicle with its entire maintenance/repair history.	YES
